

Up till now, data and BI has been data-centered, designed for data-skilled people with the business users being left out, facing barriers to the information they need to make data-driven decisions. People want business answers. We have an opportunity today to shift the user experience toward language interfaces and humanize data to make it people-centric"

-Uljan Sharka
CEO of iGenius

iGenius's GPT for numbers product Crystal is a voice and text-based data platform that lets people effortlessly access and analyze their business data. Powered by context-based conversational AI, the system empowers users to access data independently and on-the-go without extensive training or intervention from data and IT teams. Seamless system training through Crystal's fluid AI engine can easily fit multiple use cases and be adapted to rapid business changes. There's no need to retrain models or rely on specialists to reshape the system, as the intuitive interface does that for users automatically. Crystal's system also suggests the best questions to ask next, helping to guide customers' data research.

iGenius Crystal

Making Data Human
With a Simple and
Intuitive Interface

Key Features				
	Guided Data Discovery	Anomaly Detection	Automated Forecasting	Threshold Alerts

Vertical:

- Banking/ FSI
- Retail
- Health and Lifesciences
- Manufacturing
- Industrial
- Energy

Use Cases:

- Machine Condition Monitoring
- Logistics and Tracking
- Situational Monitoring
- Data Analysis
- Control Optimization and Autonomy
